

1 問題設定

2 ベイズ推論

2.1 a と b の分布

2.2 ノイズ σ の推定

前のファイルを参照

2.3 モデル選択

$$y = ax + b \quad \text{か} \quad y = ax \quad \text{か}$$

たとえば …

フックの法則

$$f = kx + f_0$$

ニュートンの運動方程式

$$f = ma + f_0$$

など $y = ax$ 型の理論が選ばれることもある

$y = ax$ の理論を作る

$$\mathbb{X} = \{x_1, x_2, \dots, x_N\}, \mathbb{Y} = \{y_1, y_2, \dots, y_N\}$$

$$y = ax$$

$$a_0 = \frac{\overline{xy}}{\overline{x^2}} \quad (\text{MAP 推定})$$

$$p(a | \mathbb{X}, \mathbb{Y}) = \sqrt{\frac{N\overline{x^2}}{2\pi\sigma^2}} \exp\left(-\frac{N\overline{x^2}}{2\sigma^2}(a - a_0)^2\right)$$

$p(\sigma | \mathbb{X}, \mathbb{Y})$ はどうなるか？

$$\begin{aligned}
E(a) &= \frac{1}{N} \sum_{i=1}^N (y_i - ax_i)^2 \\
&= \frac{1}{N} \sum_{i=1}^N \{y_i^2 - 2ax_i y_i + a^2 x_i^2\} \\
&= \frac{1}{N} \sum_{i=1}^N y_i^2 - 2a \frac{1}{N} \sum_{i=1}^N x_i y_i + a^2 \frac{1}{N} \sum_{i=1}^N x_i^2 \\
&= \overline{y^2} - 2a\overline{xy} + a^2\overline{x^2} \\
\frac{\partial E(a)}{\partial a} &= -2\overline{xy} + 2a\overline{x^2} = 0
\end{aligned}$$

よって

$$a = \frac{\overline{xy}}{\overline{x^2}}$$

のとき $E(a)$ が最小。平方完成すると

$$\begin{aligned}
E(a) &= \overline{x^2} \left(a^2 - 2a \frac{\overline{xy}}{\overline{x^2}} + \left(\frac{\overline{xy}}{\overline{x^2}} \right)^2 - \left(\frac{\overline{xy}}{\overline{x^2}} \right)^2 \right) + y^2 \\
&= \overline{x^2} \left(a - \frac{\overline{xy}}{\overline{x^2}} \right)^2 + \frac{(\overline{xy})^2}{\overline{x^2}} + \overline{y^2} \\
a_0 &= \frac{\overline{xy}}{\overline{x^2}} \\
E(a_0) &= \frac{(\overline{xy})^2}{\overline{x^2}} + y^2
\end{aligned}$$

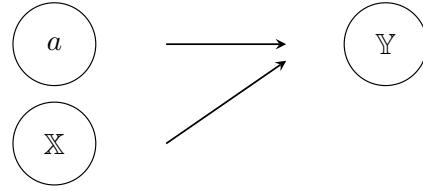

したがって $E(a)$ は次のように書き換えられる

$$E(a) = E(a_0) + \overline{x^2}(a - a_0)^2$$

a の分布

$$\begin{aligned}
y_i &= ax_i + n_i \\
n_i &\sim N(0, \sigma^2) \\
p(n_i) &= \frac{1}{\sqrt{2\pi}\sigma} \exp\left(-\frac{n_i^2}{2\sigma^2}\right) \\
\mathbb{X} &= \{x_1, x_2, \dots, x_N\} \\
\mathbb{Y} &= \{y_1, y_2, \dots, y_N\}
\end{aligned}$$

$p(a | \mathbb{X}, \mathbb{Y})$ が知りたい

同時分布

$$p(\mathbb{X}, \mathbb{Y}, a)$$

$$\begin{aligned} p(\mathbb{X}, \mathbb{Y}, a) &= p(\mathbb{Y} | \mathbb{X}, a)p(\mathbb{X})p(a) \\ p(\mathbb{Y} | \mathbb{X}, a) &= \prod_{i=1}^N \frac{1}{\sqrt{2\pi}\sigma} \exp\left(-\frac{(y_i - ax_i)^2}{2\sigma^2}\right) \\ &= (2\pi\sigma^2)^{-\frac{N}{2}} \exp\left(-\frac{N}{2\sigma^2} \frac{1}{N} \sum_{i=1}^N (y_i - a_i)^2\right) \\ &= (2\pi\sigma^2)^{-\frac{N}{2}} \exp\left(-\frac{N}{2\sigma^2} E(a)\right) \end{aligned}$$

$$E(a) = E(a_0) + \overline{x^2}(a - a_0)^2$$

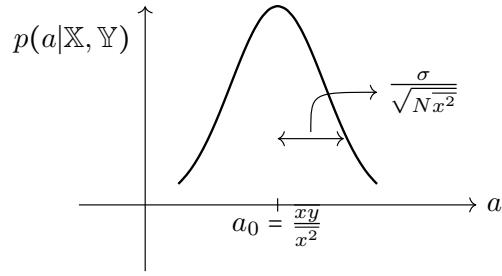

$$a_0 = \frac{\overline{xy}}{\overline{x^2}}$$

$$\begin{aligned} p(\mathbb{X}, \mathbb{Y}, a) &= p(\mathbb{Y} | \mathbb{X}, a)p(\mathbb{X})p(a) \\ &= p(a | \mathbb{X}, \mathbb{Y})p(\mathbb{X}, \mathbb{Y}) \\ \therefore p(a | \mathbb{X}, \mathbb{Y}) &\propto p(\mathbb{Y} | \mathbb{X}, a) \\ &= (2\pi\sigma^2)^{-\frac{N}{2}} \exp\left(-\frac{N}{2\sigma^2} E(a)\right) \\ &= (2\pi\sigma^2)^{-\frac{N}{2}} \exp\left(-\frac{N}{2\sigma^2} E(a_0)\right) \exp\left(-\frac{N\overline{x^2}}{2\sigma^2}(a - a_0)^2\right) \\ &\propto \exp\left(-\frac{N\overline{x^2}}{2\sigma^2}(a - a_0)^2\right) \end{aligned}$$

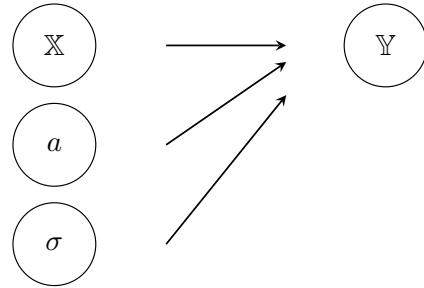

$$\int da \ p(a | \mathbb{X}, \mathbb{Y}) = 1 \text{ より}$$

$$p(a | \mathbb{X}, \mathbb{Y}) = \sqrt{\frac{N\overline{x^2}}{2\pi\sigma^2}} \exp\left(-\frac{N\overline{x^2}}{2\sigma^2}(a - a_0)^2\right)$$

となる

ノイズ σ の推定

生成モデル

$$\begin{aligned} & p(\mathbb{Y} | \mathbb{X}, a, \sigma) \\ & p(\sigma | \mathbb{X}, \mathbb{Y}) \rightarrow \sigma \text{を決めて} \\ & p(a | \mathbb{X}, \mathbb{Y}, \sigma) \end{aligned}$$

が得られる

$p(\mathbb{X}, \mathbb{Y}, a, \sigma)$ を考える

$$\begin{aligned} p(\mathbb{X}, \mathbb{Y}, \sigma) &= \int da \underbrace{p(\mathbb{X}, \mathbb{Y}, a, \sigma)}_{p(\sigma)p(a)p(\mathbb{X})p(\mathbb{Y} | \mathbb{X}, a, \sigma)} \\ &\propto \int da p(\sigma)p(a)p(\mathbb{X})p(\mathbb{Y} | \mathbb{X}, a, \sigma), \\ p(\mathbb{X}, \mathbb{Y}, \sigma) &= p(\sigma | \mathbb{X}, \mathbb{Y})p(\mathbb{X}, \mathbb{Y}) \\ \therefore p(\sigma | \mathbb{X}, \mathbb{Y}) &\propto \int da p(\mathbb{Y} | \mathbb{X}, a, \sigma) \\ &= \int da (2\pi\sigma^2)^{-\frac{N}{2}} \exp\left(-\frac{N}{2\sigma^2} E(a)\right) \\ &= (2\pi\sigma^2)^{-\frac{N}{2}} \exp\left(-\frac{N}{2\sigma^2} E(a_0)\right) \int da \exp\left(-\frac{N\bar{x}^2}{2\sigma^2}(a - a_0)^2\right) \\ &= (2\pi\sigma^2)^{-\frac{N-1}{2}} \exp\left(-\frac{N}{2\sigma^2} E(a_0)\right) \times \sqrt{\frac{1}{N\bar{x}^2}} \end{aligned}$$

MAP 推定

$$\begin{aligned}
 F(\sigma) &= -\log p(\sigma | \mathbb{X}, \mathbb{Y}) \\
 &= \frac{N}{2\sigma^2} E(a_0) + \frac{N-1}{2} \log(2\pi\sigma^2) \\
 \text{変数変換} \quad S &= \sigma^2 \\
 F(S) &= \frac{N}{2S} E(a_0) + \frac{N-1}{2} \log(2\pi S) \\
 \frac{dF(S)}{dS} &= -\frac{N}{2S^2} E(a_0) + \frac{N-1}{2S} = 0
 \end{aligned}$$

S の微分 = 0 より

$$\begin{aligned}
 S(N-1) &= NE(a_0) \\
 S &= \frac{N}{N-1} E(a_0) \\
 \sigma^2 &= \frac{N}{N-1} \frac{1}{N} \sum_{i=1}^N (y_i - a_0 x_i)^2 \\
 &= \frac{1}{N-1} \sum_{i=1}^N (y_i - a_0 x_i)^2
 \end{aligned}$$

$y = ax$ の理論を作る

$$\mathbb{X} = \{x_1, x_2, \dots, x_N\}, \mathbb{Y} = \{y_1, y_2, \dots, y_N\}$$

$$y = ax$$

$$a_0 = \frac{\overline{xy}}{\overline{x^2}} \quad (\text{MAP 推定})$$

$$p(a | \mathbb{X}, \mathbb{Y}) = \sqrt{\frac{Nx^2}{2\pi\sigma^2}} \exp\left(-\frac{Nx^2}{2\sigma^2}(a - a_0)^2\right)$$

$$p(\sigma | \mathbb{X}, \mathbb{Y}) ? ?$$

σ は

$$\begin{aligned}
 \sigma^2 &= \frac{N}{N-1} E(a_0) \\
 &= \frac{1}{N-1} \sum_{i=1}^N (y_i - a_0 x_i)^2
 \end{aligned}$$

と書ける

モデル選択

$$\begin{array}{ll} K = 1 & y = ax \\ K = 2 & y = ax + b \end{array}$$
